INTRODUCTION ..... 1

I. BLM Violated NEPA by Failing and Refusing to Prepare a Supplemental EIS for the Groundwater Project ..... 3

    A. There Remains Major Federal Action to Occur for the Groundwater Project ..... 3

    B. There are Significant New Circumstances and Information Relevant to the Environmental Concerns and Bearing on the Impacts of the Project ..... 7

        1. SNWA’s water rights determination has been overturned ..... 7

        2. SNWA’s 2015 Water Resource Plan ..... 9

        3. New science on the impacts of climate change to the region ..... 11

II. BLM Violated NEPA by Failing to Consider and Disclose the Combined Environmental Impacts of Climate Change and the Groundwater Project ... 14

III. BLM Failed to Consider Significant, Relevant Factors Concerning Mitigation in the EIS and Record of Decision, in Violation of NEPA and the APA ..... 19

    A. BLM Failed to Address Thresholds for When Additional Mitigation is Necessary to Prevent Irreversible Impacts to Springs, Streams, and Other Resources ..... 19

    B. BLM Failed to Consider Compensatory Mitigation for Wetland Losses ..... 25

IV. BLM Failed to Demonstrate that the Groundwater Project Will Comply with the Ely RMP’s Mandatory Protections for Wildlife and Aquatic Species ..... 28

    A. Compensatory Mitigation Requirements for “Special Status Species” ..... 28

    B. Compensatory Mitigation Requirements for Impacts to Aquatic Habitats ..... 33

## INTRODUCTION

1  
2 The Groundwater Project's purpose is to facilitate "the largest water appropriations in  
3 Nevada history" and "likely the largest interbasin transfer of water in U.S. history," impacting  
4 four basins that "encompass 20,688 square miles of Nevada." Fink Dec., Exh A at 3-4.  
5 According to the Nevada Department of Wildlife, "the Project could result in potential  
6 widespread and wholesale extirpations of populations of fisheries resources," and "significant  
7 disruptions to or disturbance of terrestrial wildlife species." AR Doc. 9230 at 34965. BLM  
8 violated the National Environmental Policy Act ("NEPA") and the Federal Land Policy and  
9 Management Act ("FLPMA") in developing and authorizing the Groundwater Project, and the  
10 Project should be held unlawful and set aside. 5 U.S.C. § 706.  
11  
12

13 BLM's response brief runs afoul of two long-standing principles of administrative law  
14 and NEPA. First, counsel for BLM routinely makes statements or presents opinions without  
15 providing any support in the administrative record. The Court, however, "may not accept  
16 appellate counsel's post hoc rationalizations for agency action." *Northwest Env'tl. Defense Ctr.*  
17 (*"NEDC"*) *v. Bonneville Power Admin.*, 477 F.3d 668, 688 (9th Cir. 2007), *quoting Burlington*  
18 *Truck Lines v. United States*, 371 U.S. 156, 168 (1962). The Court "may only sustain an  
19 agency's action on the grounds actually considered by the agency." *NEDC*, 477 F.3d at 686.  
20

21 Second, BLM argues throughout in its response that it only needed to consider the  
22 environmental impacts and legal compliance for one of the three components of the Groundwater  
23 Project, which is construction of the initial right-of-way. NEPA, however, requires agencies to  
24 analyze both the direct and indirect environmental impacts of proposed actions, with "indirect  
25 effects" defined as effects that are "caused by the action and later in time or farther removed in  
26  
27  
28

1 distance,” but still “reasonably foreseeable.” 40 C.F.R. §§ 1502.16, 1508.8(b). The groundwater  
2 pumping is clearly “reasonably foreseeable,” as that is the very purpose of the Project.

3         The Groundwater Project EIS is in fact the only time that BLM will analyze the overall  
4 environmental consequences of the entirety of the Groundwater Project, and similarly the only  
5 time that BLM can assess whether the Project as a whole is able to comply with mandatory  
6 environmental protections. Contrary to BLM’s arguments, this is not a case where the Center’s  
7 claims must await later site-specific NEPA analyses, where the locations of future development  
8 are identified in greater detail. The Center’s claims and the primary concerns of the Project  
9 identified by state and federal agencies relate to the severe environmental impacts resulting from  
10 the massive amounts of groundwater that will be withdrawn from Spring, Delamar, Dry Lake,  
11 and Cave Valleys, regardless of the precise locations of groundwater wells or facilities.  
12

13         Furthermore, NEPA requires BLM to integrate the NEPA process “at the earliest possible  
14 time” to “head off potential conflicts.” 40 C.F.R. § 1501.2; *see also Marsh v. ONRC*, 490 U.S.  
15 360, 391 (1989) (“NEPA ensures that the agency will not act on incomplete information, only to  
16 regret its decision after it is too late to correct”). Here, there are major potential conflicts  
17 between the severe impacts that would be caused by the groundwater pumping and BLM’s  
18 ability to comply with mandatory requirements for wetlands, wildlife, and other resources. And  
19 once such a major proposal receives initial approval, “[t]he agency as well as private parties may  
20 well have become committed to the previously chosen course of action.” *Massachusetts v. Watt*,  
21 716 F.2d 946, 952 (1st Cir. 1983). It will thus become far more difficult for plaintiffs and others  
22 to influence future “stages” of the Project, as it is “far easier to influence an initial choice than to  
23 change a mind already made up.” *Id.* Now is the appropriate time for the Court to address and  
24 resolve the serious questions raised by this unprecedented groundwater development proposal.  
25  
26  
27  
28

1 **I. BLM Violated NEPA by Failing and Refusing to Prepare a Supplemental EIS**

2 NEPA requires BLM to prepare a Supplemental EIS (“SEIS”) if “[t]here are significant  
3 new circumstances or information relevant to environmental concerns and bearing on the  
4 proposed action or its impacts.” 40 C.F.R. § 1502.9(c)(1). As set forth in the Center’s opening  
5 brief, there has been significant new information concerning the Groundwater Project subsequent  
6 to the Final EIS, including: (1) SNWA’s water rights were overturned because the appropriation  
7 was found unfair to future generations and not in the public interest, with an inadequate  
8 mitigation plan; (2) SNWA’s 2015 Water Resources Plan discloses that the Project may not be  
9 needed; and (3) new science finds more severe and more certain impacts from climate change on  
10 the region. Center’s Br. at 10-17. BLM’s refusal to supplement the EIS violates NEPA. *Id.*

11  
12  
13 A. There Remains Major Federal Action to Occur for the Groundwater Project

14 In its response, BLM argues it was not required to prepare an SEIS for the Groundwater  
15 Project “because there is no major federal action left to occur.” BLM’s Br. at 56; *see also*  
16 SNWA’s Br. at 48. Notably, this argument has no support in the record, as BLM’s response to  
17 the Center’s request for an SEIS did not assert there was no remaining major federal action. AR  
18 Doc. 47371. To the contrary, BLM highlighted the multiple steps that still must occur, and  
19 confirmed that “[c]onstruction would not occur for at least 5 years.” *Id.* The Court should not  
20 accept the newly created rationale of BLM’s counsel. *Burlington Truck Lines*, 371 U.S. at 168.

21  
22 Moreover, BLM and SNWA are wrong that there is no remaining major federal action  
23 concerning the Groundwater Project. BLM’s Br. at 56-57; SNWA’s Br. at 48-49. First, as  
24 explained, BLM did not issue the May 23, 2013 right-of-way for the Project (AR Doc. 47363)  
25 until *after* the Center’s May 6, 2013 request for an SEIS. AR Doc. 47359. Thus, as in *Bundorf v*  
26 *Jewell*, BLM retained ample discretion in issuing the right-of-way to constitute ongoing agency  
27  
28

1 action under NEPA. 2015 U.S. Dist. LEXIS 13928, \*27-29 (D. Nev. Feb. 3, 2015). BLM's  
2 attempt to distinguish *Bundorf* fails, as in both instances BLM had not yet issued the right-of-  
3 way at the time the plaintiff requested an SEIS. BLM's Br. at 57 n. 24.<sup>1</sup>

4  
5 Second, even after issuance of the right-of-way, BLM continues to retain considerable  
6 discretion over the Groundwater Project and major federal action still remains to occur. As BLM  
7 admits, the Project "will take nearly forty years to complete," and it "will take decades to go  
8 through necessary federal and state approval processes." BLM's Br. at 1, 9. "There are several  
9 steps that must occur before even the main conveyance pipeline may be constructed." *Id.* at 4.  
10 These steps include SNWA's "Notices to Proceed" with preconstruction activities, which BLM  
11 must approve; SNWA's preparation of a "Plan of Development" ("POD"), which BLM must  
12 approve; and BLM's development of a "Construction, Operation, Maintenance, Monitoring,  
13 Management, and Mitigation Plan" ("COM Plan"), which "must be approved before construction  
14 can move forward." *Id.* at 4-5. "The COM Plan would be fully developed after SNWA's  
15 completion and BLM's approval of the POD," and "in coordination with other federal, state,  
16 local and tribal entities." *Id.* at 35. "After the COM Plan is completed, SNWA would then be  
17 able to submit right-of-way requests for future stages of the Project." *Id.* Thus, as recognized by  
18 BLM, the preparation and approval of a Plan of Development and COM Plan is an "ongoing  
19 process for implementation" of the Project, and NEPA "will be ongoing for many years." AR  
20 Doc. 47416 at 193032. Indeed, construction is not expected to even begin for at least five years.  
21 AR Doc. 47418 at 193057. In short, implementation of the Project has yet to begin, numerous  
22 plans and approvals are still required, and NEPA's SEIS requirement still applies. AR Doc.  
23 47483 at 197533 (the SEIS requirement applies after Final EIS, "but prior to implementation").

24  
25  
26  
27 <sup>1</sup> SNWA simply ignores the *Bundorf* decision entirely. SNWA's Br. at 48-49.  
28

1 Contrary to the assertions of BLM and SNWA, there is no support in the record that  
2 BLM's continued involvement, authority, and discretion over the Plan of Development, COM  
3 Plan, and other plans and approvals for the Groundwater Project, is "ministerial" or "limited."  
4 BLM's Br. at 56; SNWA's Br. at 48. BLM in fact explained in the record that the "monitoring,  
5 management, and mitigation program" for the Project is "complex and extensive." AR Doc.  
6 12417 at 132723. In the EIS, BLM identified nearly twenty goals and objectives for just the  
7 COM Plan, such as ensuring the Project complies with resource protection requirements,  
8 protecting federal water rights, avoiding impacts that could cause jeopardy to listed species, and  
9 identifying triggers for early warning of adverse impacts. AR Doc. 12415 at 131194.  
10

11 This case is far different from *Center for Biological Diversity v. Salazar*, 706 F.3d 1085,  
12 1088 (9th Cir. 2013), where a mine plan of operations was approved by BLM in the 1980s, and  
13 the mine had been "actively developed" for a number of years. BLM's Br. at 56. Here, BLM  
14 had not yet issued the right-of-way when the Center initially requested an SEIS, the Plan of  
15 Development and COM Plan for the Project have still not been completed or approved, and no  
16 construction has commenced or is even anticipated to begin for at least a number of years.  
17  
18

19 This case is also distinguishable from *Cold Mountain v. Garber*, 375 F.3d 884, 894 (9th  
20 Cir. 2004), where the Forest Service had issued a special use permit that was being implemented,  
21 and plaintiffs had identified no further actions that would be taken by the Forest Service  
22 concerning the permit. For the Groundwater Project, by contrast, the right-of-way permit had  
23 not been issued, and BLM must still undertake multiple steps and approvals as part of its  
24 ongoing implementation and oversight of the Project before any construction can begin.<sup>2</sup>  
25

26  
27 <sup>2</sup> This case is similarly distinguishable from the cases relied on by SNWA. SNWA's Br. at 48-  
28 49. In *W. Org. of Resource Councils v. Jewell*, the agency action at issue was implemented 35  
years earlier, in 1979. 2015 U.S. Dist. LEXIS 113683, \*13 (D.D.C. Aug. 27, 2015). Here, by  
contrast, multiple steps and BLM approvals remain to occur before implementation of the Project

1 This case instead shares more in common with *Sierra Club v. Bosworth*, 465 F.Supp. 2d  
2 931 (N.D. Cal. 2006), where the court held that major federal action remained to occur after  
3 timber sale contracts had been approved by the Forest Service and awarded to a private party.  
4 The court took into consideration that “the timber sale contracts required the Forest Service’s  
5 written approval of the operating plan prior to the commencement of logging.” *Sierra Club*, 465  
6 F.Supp. 2d at 939. Similarly, the right-of-way at issue here still requires multiple steps and  
7 approvals by BLM before any implementation of the project is allowed. AR Doc. 47363 at  
8 192249-50 (requiring, in part, a “Notice to Proceed” from BLM and the approval of a “COM  
9 Plan” by BLM). The court also considered that the timber sale contracts could still be revisited  
10 by the Forest Service. *Bosworth*, 465 F.Supp. 2d at 939. Here, SNWA’s right-of-way permit  
11 may also “be reviewed at any time deemed necessary.” AR Doc. 47363 at 192250.<sup>3</sup>

14 In sum, preparation of a “postdecision” SEIS “is at times necessary to satisfy [NEPA’s]  
15 ‘action-forcing’ purpose.” *Marsh*, 490 U.S. at 370-71. It would be incongruous with NEPA’s  
16 purposes “for the blinders to adverse environmental effects, once unequivocally removed, to be  
17 restored prior to the completion of agency action simply because the relevant proposal has  
18 received initial approval.” *Id.* at 371. NEPA therefore requires an SEIS “when the remaining  
19 governmental action would be environmentally ‘significant.’” *Id.* at 372. BLM still must take

22 can commence. And in *Envtl. Prot. Info. Ctr. v. U.S. Fish and Wildlife Serv.*, the agency had  
23 issued a permit years earlier for logging on private lands, which had commenced and was  
24 ongoing, and the agency retained monitoring and oversight over compliance with the permit.  
25 2005 U.S. Dist. LEXIS 30843, \*13-14 (N.D. Cal., Nov. 10, 2005). For the Groundwater Project,  
BLM did not issue the right-of-way permit until *after* the Center’s first request for an SEIS, and  
multiple steps remain before any on-the-ground implementation of the Project.

26 <sup>3</sup> See also *Klamath-Siskiyou Wildlands Center v. U.S. Forest Serv.*, 2007 U.S. Dist. LEXIS  
27 51974, \*3-5 (D. Or., July 16, 2007) (court found major federal action remained to occur where  
28 timber sale contract had been issued, but commencement of the project had not yet begun).

1 multiple actions and approvals concerning the Groundwater Project, and the resulting  
2 environmental impacts would be significant, and thus major federal action remains to occur.

3 B. There are Significant New Circumstances and Information Relevant to the  
4 Environmental Concerns and Bearing on the Impacts of the Project

5 I) *SNWA's water rights determination has been overturned*

6 As explained, the primary concern expressed by plaintiffs and other agencies with the  
7 Groundwater Project is the severe impacts that would result from the massive amount of  
8 groundwater withdrawn, and thus it is relevant that SNWA's water rights were overturned, with  
9 the court directing the State Engineer to recalculate the appropriations. Center's Br. at 11; Fink  
10 Dec., Exh. A. The court noted that "groundwater mining" is defined as "pumping exceeding the  
11 perennial yield over time such that the system never reaches equilibrium," and found that under  
12 SNWA's appropriation, equilibrium "will never be reached." Fink Dec., Exh. A at 10, 12.

13 Remarkably, BLM does not contest that equilibrium would never be reached if the  
14 Groundwater Project proceeds. BLM's Br. at 59. The court further found, however, that  
15 groundwater mining at such a massive scale would be "unfair to following generations of  
16 Nevadans," and "not in the public interest." Fink Dec., Exh. A at 12-13. As explained, these  
17 findings are directly relevant because BLM is required to "manage the public lands under the  
18 principles of multiple use and sustained yield." 43 U.S.C. §1732(a); *see also id.* § 1701(a)(7).  
19 This mandate requires BLM to take into account "the long-term needs of future generations,"  
20 and to maintain "in perpetuity" a high-level annual or periodic output of renewable resources on  
21 public lands. 43 U.S.C. § 1702(c), (h); *see also* 43 U.S.C. § 1765(b) (requiring protection of the  
22 public interest). Moreover, NEPA required BLM to explain in the Groundwater Project EIS  
23 whether the proposal would comply with environmental laws. 40 C.F.R. § 1502.2(d). In light of  
24 the court's findings that the groundwater pumping in Spring Valley would exceed the perennial  
25  
26  
27  
28

1 yield and never reach equilibrium, which is unfair to future generations and not in the public  
2 interest, BLM must prepare an SEIS to revisit whether this Project could satisfy the multiple use  
3 and sustained yield principles that must guide its management of public lands and resources.

4  
5 As explained, the court also found several flaws in the “monitoring, management, and  
6 mitigation” stipulation between SNWA and the federal agencies, including the failure to set forth  
7 objective standards for when environmental impacts are unreasonable and additional mitigation  
8 required, and the failure to include a plan to monitor such a large area. Fink Dec., Exh. A, pp.  
9 15-18, 20-23. In response, BLM states that “[t]he fact that more analysis of mitigation may be  
10 necessary for purposes of securing water rights does not mean that more analysis is required  
11 under NEPA.” BLM’s Br. at 59. The court, however, did not just identify a need for “more  
12 analysis” concerning mitigation. The court instead identified substantive, fundamental problems  
13 with the stipulated mitigation plan, which is a key component of the mitigation plan that BLM  
14 relied on for the Groundwater Project. *See* AR Doc. 12417 at 132723 (identifying the stipulated  
15 agreement as one of the two monitoring and mitigation processes for the Groundwater Project).  
16 The court therefore did not direct the Engineer to just further “analyze” mitigation, but rather to  
17 “[d]efine standards, thresholds, or triggers so that mitigation of unreasonable effects from  
18 pumping of water are neither arbitrary or capricious.” Fink Dec., Exh. A, p. 23.

19  
20  
21 Importantly, BLM provided no response to the Center’s second request for an SEIS,  
22 which was sent shortly after the decision overturning SNWA’s water rights. Thus there is no  
23 evidence before the Court whether BLM considered the directly relevant findings and conclusion  
24 of the state court concerning the same water rights that underlie the very purpose and need for  
25 the Groundwater Project, and whether this new information triggered the need for an SEIS.  
26 “When confronted with [the Center’s] request to prepare a SEIS, [BLM] was required to evaluate  
27  
28

1 the new information and determine whether or not it was of sufficient significance to require a  
2 SEIS.” *Sierra Club v. U.S. Dept. of Transp.*, 310 F.Supp. 2d 1168, 1197 (D. Nev. 2004), *citing*  
3 *Friends of the Clearwater v Dombeck*, 222 F.3d 552, 558 (9th Cir. 2000). BLM was required “to  
4 make a timely review” of whether the court’s findings and decision required an SEIS for the  
5 Groundwater Project, and its “failure to evaluate in a timely manner the need to supplement the  
6 original EIS in light of that new information violated NEPA.” *Friends*, 222 F.3d at 559.<sup>4</sup>

8 Rather than explaining where in the record BLM considered the relevance and  
9 significance of the new information, BLM’s response relies solely on the thoughts and opinions  
10 of BLM’s counsel. BLM’s Br. at 57-59. The court, however, “may not accept [BLM] counsel’s  
11 post hoc rationalizations for agency action,” as BLM’s decision must “be upheld, if at all, on the  
12 same basis articulated . . . by the agency itself.” *Burlington Truck Lines*, 371 U.S. at 168-69.

14 2) *SNWA’s 2015 Water Resource Plan*

15 SNWA’s 2015 Water Resource Plan discloses for the first time that even under the worst  
16 case scenario, the Groundwater Project is now not needed until at least 2035, and that under  
17 other scenarios, the Project would not be needed until much later, if at all. Center’s Br. at 14,  
18 *citing* Fink Dec., Exh. D, pp. 39-40. BLM responds that the Project “has always been long term  
19 in nature.” BLM’s Br. at 59. But this ignores the administrative record, as explained in the  
20 Center’s opening brief. The purpose and need for the Groundwater Project stems from SNWA’s  
21 2004 application for a right-of-way, which anticipated that construction would begin in 2006.  
22 AR Doc. 46. The 2011 Draft EIS stated that construction would start in 2013, with the pipeline  
23

---

25 <sup>4</sup> *See also Great Old Broads for Wilderness v. Kimbell*, 709 F.3d 836, 855 (9th Cir. 2013) (“An  
26 agency must document its decision that no SEIS is required”); *Warm Springs Dam Task Force v.*  
27 *Gribble*, 621 F.2d 1017, 1024 (9th Cir. 1980) (the court should consider “the degree of care with  
28 which the agency considered the [new] information,” and “the degree to which the agency  
supported its decision not to supplement with a statement of explanation or additional data”).

1 completed by 2019. AR Doc. 8161 at 29129. And the 2012 Final EIS assumed that SNWA  
2 needed to complete the pipeline by at least 2020. AR Doc. 12413 at 129683.

3 SNWA states in response that “under one scenario” in the 2015 Plan, the Groundwater  
4 Project would not be needed until 2035. SNWA’s Br. at 56. But again, this is the Plan’s worst  
5 case scenario. Fink Dec., Exh. D., p 40. Under the “normal supply scenario,” the Project is not  
6 needed at all. *Id.*, p. 39. And under the “shortage scenario (lower demand),” the Project is not  
7 needed until at least 2058. *Id.* While SNWA argues that approval was needed now even though  
8 the Project is not needed for decades, it cites to no supporting evidence. SNWA’s Br. at 57.<sup>5</sup>

9  
10 The new information from SNWA indicating that the Groundwater Project may no longer  
11 be needed is both relevant and significant. Moreover, this information demonstrates that SNWA  
12 has no intention of using the right-of-way for at least the initial five-year period, as required. 43  
13 U.S.C. § 1766; 43 C.F.R. § 2807.17(c). While SNWA claims that this is outside the scope of the  
14 litigation (SNWA’s Br. at 57), it is still a relevant factor for determining whether or not the new  
15 information contained in the 2015 Plan is significant under NEPA. Indeed, part of BLM’s  
16 responsibility under NEPA is to evaluate whether the Groundwater Project will comply with  
17 other laws and policies. 40 C.F.R. § 1502.2(d). And the fact that “five years have not yet  
18 passed” is not the issue (SNWA’s Br. at 57), as SNWA’s 2015 Plan plainly admits that the  
19 Groundwater Project will not be needed until at least 2035, and may not be needed at all.

20  
21  
22 As with the state court water rights decision, BLM has failed to even consider whether  
23 the new information contained in SNWA’s 2015 Water Resources Plan necessitates an SEIS, in  
24 violation of NEPA. *Friends*, 222 F.3d at 558 (agencies must evaluate new information “and  
25

26  
27 <sup>5</sup> Additionally, SNWA’s emphasis on the multiple steps, planning, and permitting that still must  
28 occur “to bring the Project online” contradicts its previous argument that there is no major  
federal action concerning the Groundwater Project that is left to occur. *Id.*

1 make a reasoned determination whether it is of such significance as to require an SEIS”); *Great*  
2 *Old Broads*, 709 F.3d at 855 (“An agency must document its decision that no SEIS is required”).

3  
4 3) *New science on the impacts of climate change to the region*

5 On May 6, 2013, the Center submitted to BLM new scientific studies on the impacts of  
6 climate change on the Southwest Region and requested an SEIS, which was followed later by  
7 another critically important report for the region. AR Doc. 47359; AR Doc. 47360; Fink Dec.,  
8 Exh. E. BLM refused to consider these reports (AR Doc. 47371), and BLM’s response confirms  
9 that the reports were not considered. BLM’s Br. at 60, n. 26. BLM instead unlawfully  
10 determined that under NEPA it never needs to consider new science. AR Doc. 47371 at 192635-  
11 36 (refusing to review new science that was issued after completion of the Final EIS).

12  
13 The new studies show that the impacts of climate change on the Southwest Region are  
14 likely to be more severe than previously thought, and that the predicted impacts of climate  
15 change on the region are more certain than presented in the Final EIS. Center’s Br. at 15-16. In  
16 response, BLM and SNWA do not dispute that these new reports were prepared by respected  
17 scientists, or that the reports are relevant to the region and the Groundwater Project, or that BLM  
18 has never considered these reports in the context of the Groundwater Project. BLM’s Br. at 60-  
19 61; SNWA Br. at 52-53. Instead, counsel for BLM and SNWA argue that because the topics of  
20 the reports were discussed generally in the Final EIS, BLM did not need to even consider  
21 whether or not the reports’ findings were significant and triggered the need for an SEIS. *Id.*

22  
23 First, counsel for BLM and SNWA are wrong that the specific findings of the new reports  
24 were already addressed in the Final EIS. In terms of the severity and intensity of climate change  
25 on the Southwest region, the EIS states generally that “[p]rojections suggest continued strong  
26  
27  
28

1 warming” and “decreases in precipitation,” which “could affect water resources.” AR Doc.

2 12414 at 130209. The new science, by contrast, predicts far more severe impacts:

3 [T]he mean state of drought in the late 21<sup>st</sup> century over the Central Plains and Southwest  
4 will likely exceed even the most severe megadrought periods of the Medieval era in both  
5 high and moderate future emission scenarios, *representing an unprecedented*  
*fundamental climate shift with respect to the last millennium.*

6 Fink Dec., Exh. E at 7 (emphasis added).

7 *Our results point to a remarkably drier future that falls far outside the contemporary*  
8 *experience of natural and human systems in Western North America, conditions that may*  
9 *present a substantial challenge to adaptation.*

10 *Id.* (emphasis added).

11 Drought, as defined by Colorado River flow amount, is projected to become more  
12 frequent, more intense, and more prolonged, *resulting in water deficits in excess of those*  
*during the last 110 years (high confidence).*

13 AR Doc. 47360 at 191606 (emphasis added).

14 And in terms of the certainty of climate change science, BLM stated in the record that:

15 “It is important to recognize that the current state-of-the-art climate change science reflects  
16 considerable uncertainties associated with future trends and potential effects to specific regions  
17 or species. This uncertainty is qualified in the Final EIS text.” AR Doc. 12417 at 132704.

18 Moreover, because of the uncertainties, BLM stated in the EIS that “it was not possible to  
19 provide a reasonable or meaningful simulation of the combined effects of pumping and climate  
20 change on water resources.” AR Doc. 12414 at 130088. The new science, by contrast, finds:

21 Notably, the drying in our assessment is robust across models and moisture balance  
22 metrics. *Our analysis thus contrasts sharply with the recent emphasis on uncertainty*  
23 *about drought projections for these regions.*

24 Fink Dec., Exh. E at 7 (emphasis added); *see also* AR Doc. 47360 at 192036 (“There is now  
25 more evidence and more agreement among climate scientists about the physical climate and  
26 related impacts in the Southwest”).  
27  
28

1 Second, BLM is wrong that BLM's experts did not need to consider the new climate  
2 change reports, and that the agency could instead simply rely on its counsel's litigation position  
3 that the new science "does not provide significant new information." BLM's Br. at 61. The  
4 Ninth Circuit is clear that NEPA required BLM "to make a timely review" of whether the new  
5 climate change science required an SEIS, and BLM's "failure to evaluate in a timely manner the  
6 need to supplement the original EIS in light of that new information violated NEPA." *Friends*,  
7 222 F.3d at 559; *Sierra Club*, 310 F.Supp. 2d at 1197 (BLM "was required to evaluate the new  
8 information and determine whether or not it was of sufficient significance to require a SEIS").  
9

10 For the same reason, BLM and SNWA are wrong to criticize the Center for failing to  
11 explain whether the new climate science would allow BLM to now quantify the combined  
12 impacts of climate change and the Groundwater Project on groundwater flow or other resources.  
13 BLM's Br. at 60; SNWA's Br. at 54. As the Ninth Circuit has explained, "[i]t is the agency, not  
14 an environmental plaintiff, that has a 'continuing duty to gather and evaluate new information  
15 relevant to the environmental impact of its actions,' even after the release of an EIS." *Friends of*  
16 *the Clearwater*, 552 F.3d at 559, quoting *Warm Springs Dam Task Force*, 621 F.2d at 1023.<sup>6</sup>  
17

18 Last, BLM and SNWA both ignore in their responses that BLM's only response to the  
19 new climate change science that is within the record before the Court concluded as follows:  
20

21 The Final EIS relied on the best information available to BLM *at the time it was issued*;  
22 therefore, a need to supplement the EIS has not been identified at this time . . . The  
23 [identified] documents were issued *after* the Final EIS was prepared.  
24

25  
26 <sup>6</sup> Similarly, SNWA cites to *Tri-Valley CARES v. U.S. Dep't of Energy*, 671 F.3d 1113, 1130 (9th  
27 Cir. 2012), to argue that the Center has not demonstrated that the new science shows a "seriously  
28 different picture" than the EIS. SNWA's Br. at 54. In *Tri-Valley*, however, the court deferred to  
the agency's determination in a "supplemental report," which it had prepared to consider the new  
information. *Tri-Valley*, 671 F.3d at 1130. Here, by contrast, BLM entirely failed to address the  
new climate science, and thus has not even considered whether it triggered the need for an SEIS.

1 AR Doc. 47371 at 192635-36 (emphasis added). As explained, BLM's response demonstrates a  
2 fundamental misunderstanding of its continued obligation to consider new information following  
3 completion of an EIS. The fact that BLM relied on the best available information *at the time it*  
4 *prepared* the EIS is irrelevant to the SEIS requirement. Similarly, rejecting new information  
5 solely because it was issued "after the Final EIS," completely undermines NEPA's requirement  
6 for agencies to supplement EISs to address new information. As explained by the Ninth Circuit,  
7 "an agency that has prepared an EIS cannot simply rest on the original document." *Friends*, 222  
8 F.3d at 557. BLM's arbitrary response to the Center's request, and its refusal to even consider  
9 whether the new science triggered the need for an SEIS, violated NEPA. *Id.* at 559.

## 11 **II. BLM Violated NEPA by Failing to Consider and Disclose the Combined** 12 **Environmental Impacts of Climate Change and the Groundwater Project**

13 As set forth in the Center's opening brief, NEPA requires agencies to consider both (1)  
14 the effects of a proposed action on climate change, and (2) the implications of climate change for  
15 the environmental effects of a proposed action. Center's Br. at 17, *citing* 79 Fed. Reg. 77802,  
16 77824 (Dec. 24, 2014). This case concerns the second of these two issues, and more specifically,  
17 BLM's failure to consider the combined impacts of climate change and the Groundwater  
18 Project.<sup>7</sup> In its response, BLM does not contest that it is obligated to consider these impacts  
19 under NEPA. BLM's Br. at 50-55. BLM instead argues that it did in fact analyze in the Final  
20 EIS "the cumulative impacts of climate change when combined with the impacts of the Project."  
21 *Id.* at 51. BLM is wrong, as the EIS includes no such analysis for any of the affected resources.

22  
23  
24 In its response, BLM cites to the first page of the cumulative impacts analysis for each of  
25 the affected resources, where it claims the Final EIS discusses the combined impacts of both

---

26 <sup>7</sup> BLM's reliance on *WildEarth Guardians v. Jewell*, 738 F.3d 298 (D.C. Cir. 2013) is misplaced,  
27 (BLM's Br. at 50), as it concerns the first of these two issues - a project's effects on global  
28 climate change through contributing to greenhouse gas emissions - and is thus inapplicable.

1 climate change and the Groundwater Project. BLM's Br. at 51. For each of the affected  
2 resources, however, BLM first recites in the EIS the same paragraph of general "climate change  
3 effects."<sup>8</sup> BLM then discusses in the EIS the effects of climate change *by itself* on the affected  
4 resource, or for some resources states that such effects were not evaluated. *Id.* What is missing  
5 in the EIS's cumulative effects analysis for each affected resource is any analysis or discussion  
6 of the combined, cumulative effects of *both* the impacts of climate change on the region *and* the  
7 predicted environmental effects of the Groundwater Project. *Id.*

8  
9 As explained in the Center's opening brief, providing a general discussion of climate  
10 change effects within the cumulative effects section for each affected resource does not satisfy  
11 NEPA's cumulative impacts requirement. Center's Br. at 18-19.<sup>9</sup> "Cumulative impact" means  
12 the incremental impact of the proposed action "when added to" other actions (40 C.F.R. §  
13 1508.7), and thus considering the effects of climate change and the Groundwater Project in  
14 isolation from each other does not meet this requirement. *Muckleshoot Indian Tribe*, 177 F.3d at  
15 810 (an EIS "must analyze the combined effects" of past, present and future actions).

16  
17 Moreover, simply stating in a litigation brief that the EIS addressed the cumulative  
18 impacts of climate change when combined with the impacts of the Groundwater Project, and  
19 including a long list of citations, is plainly insufficient if none of those cited pages actually  
20 include such an analysis. BLM's Br. at 51.<sup>10</sup> BLM's response quotes from the water resources

21  
22  
23 <sup>8</sup> See AR Doc. 12413 at 129910-12, 129985; AR Doc. 12414 at 130209, 130260, 130356-57,  
24 130520, 130632-33, 130684, 130724, 130753, 130769, 130819; AR Doc. 12415 at 130856,  
130896, 130957, 130985, 131032, 131151, 131174.

25 <sup>9</sup> See *Muckleshoot Indian Tribe v. U.S. Forest Serv.*, 177 F.3d 800, 811 (9th Cir. 1999) (finding  
26 that although there were twelve sections in the EIS entitled "cumulative effects," those sections  
27 merely provided "very broad and general statements" that failed to meet NEPA's requirements).

28 <sup>10</sup> SNWA cites to these same pages for the missing cumulative impacts analysis (SNWA's Br. at  
37 n. 192), as well as to a Table that similarly considers only the climate change effects in

1 section of the EIS to supposedly demonstrate that the combined impacts were considered. *Id.*,  
2 *citing* AR 130209. As with all resources in the EIS, however, the quotes pertain only to the  
3 climate change effects in the region on the resource, without factoring in or considering the  
4 combined, cumulative effects of both climate change and the environmental effects of the  
5 Project. *Id.* Thus, BLM’s response just restates generally that climate change will warm the  
6 atmosphere, increase drought, increase extreme weather events, and reduce snowpack and spring  
7 runoff. *Id.* While accurate, this is all true with or without the Groundwater Project, which was  
8 not factored into the analysis. Repeatedly stating that this is a “discussion of the cumulative  
9 impacts of climate change when combined with the impacts of the Project” does not make it so.  
10 *Id.* at 52; *Rhodes v. MacDonald*, 2009 U.S. Dist. LEXIS 84743, \*13 (M.D. Ga., Sept. 16, 2009)  
11 (“Unlike in *Alice in Wonderland*, simply saying something is so does not make it so”).<sup>11</sup>

14 BLM misconstrues the Center’s argument by claiming the Center seeks “a more specific”  
15 analysis of the combined, cumulative impacts of the Groundwater Project and climate change.  
16 BLM’s Br. at 52. The Court, however, does not need to consider whether the specificity of  
17 BLM’s analysis on this issue in the Final EIS is sufficient, as there is no such analysis at all.  
18 Thus, this case is not like *Friends of the Wild Swan v. Jewell*, where the EIS did assess the  
19 combined effects of climate change and the proposed action for each alternative. 2014 U.S. Dist.  
20 LEXIS 116788, \*31-32 (D. Mont., Aug. 21, 2014) (noting that a cumulative impacts analysis

23 isolation, and not in combination with the environmental effects of the Groundwater Project.  
24 SNWA’s Br. at 39 n. 201 (citing EIS Table 3.1-38); *id.* at 40 n. 207 (same).

25 <sup>11</sup> SNWA also tries to patch together a cumulative impacts analysis for wildlife from the EIS  
26 (SNWA’s Br. at 40), but neglects to include BLM’s conclusion that it was “not possible to relate  
27 potential effects with specific pumping alternatives.” AR Doc. 12414 at 130474-75. SNWA  
28 also quotes a statement from the EIS (SNWA’s Br. at 40), without noting that this statement was  
relying on a 2010 report which did not at all consider the Groundwater Project. AR Doc. 12414  
at 130520, *citing* BLM 2010 (AR Doc. 47689). The 2010 report instead highlighted that climate  
change is expected to exacerbate other impacts on wildlife. AR Doc. 47689 at 220236.

1 must consider “the combined effects of actions,” and that the Final EIS included “a comparison  
2 of the effects of climate change across the alternatives”). Similarly, in *Southern Utah Wilderness*  
3 *Alliance v. Burke*, the challenged EIS included a cumulative impacts analysis of the proposed  
4 action “combined with past, present, and reasonably foreseeable future actions,” including  
5 climate change effects. 981 F.Supp. 2d 1099, 1110-11 (D. Utah 2013).  
6

7 BLM and SNWA also argue that BLM was not required to “quantify” the cumulative  
8 impacts of climate change through “modeling.” BLM’s Br. at 54; SNWA’s Br. at 39. This  
9 argument is also a red herring, as the Center has never argued that a quantitative analysis or  
10 modeling was required. Rather, the EIS is deficient under NEPA because it fails to provide *any*  
11 analysis – qualitative or quantitative – of the combined, cumulative impacts of climate change  
12 effects and the anticipated environmental consequences of the Groundwater Project.  
13

14 As explained in the Center’s opening brief, other agencies notified BLM that the EIS  
15 failed to consider the combined effects of climate change and the Groundwater Project, as  
16 required by NEPA. Center’s Br. at 19-20. The U.S. Fish and Wildlife Service explained,  
17

18 The analysis of climate change effects is not very useful in that there [are] no substantive  
19 conclusions that reflect best professional judgment of *the additive effect of climate*  
20 *change* to project specific effects, or cumulative level project effects. It is highly likely  
that for some wildlife species for example, climate change will increase the vulnerability  
of a species to other stressors.

21 AR Doc. 9262 at 35066 (emphasis added). And the Nevada Department of Wildlife stated,

22 *The additional cumulative effect* from climate change to any of the described Action  
23 Alternatives on aquatic and terrestrial ecosystems, surface and groundwater resources,  
24 and associated wildlife species is potentially very significant under even conservative  
climate change scenarios; *how this is evaluated in the draft EIS is woefully inadequate.*

25 AR Doc. 9230 at 34963 (emphasis added). As in the record, BLM states that in response to these  
26 agency comments, it “reorganized the discussion in the FEIS.” BLM’s Br. at 53. However,  
27 “reorganizing” an EIS by moving the generic discussion of climate change to the cumulative  
28

1 effects section does not automatically turn that discussion into a cumulative effects analysis.  
2 Regardless as to where the discussion is found in the EIS, it still only considers the impacts of  
3 climate change on the affected resources in isolation, as opposed to in combination with the  
4 direct and indirect environmental impacts of the Groundwater Project, as required by NEPA.  
5

6 BLM further asserts that the Center misinterprets the EIS in stating that BLM relied on  
7 uncertainty to avoid considering the combined impacts of climate change and the Groundwater  
8 Project. BLM's Br. at 53. In its response to comments on this same issue of climate change and  
9 uncertainty, however, BLM confirmed that "the current state-of-the-art climate change science  
10 reflects considerable uncertainties associated with future trends and potential effects to specific  
11 regions or species," and that "[t]his uncertainty is qualified in the Final EIS text." AR Doc.  
12 12417 at 132704. Despite the uncertainties as to how climate change will continue to impact the  
13 region, agencies are to "use current scientific information and methodologies for assessing . . .  
14 climate effects" in EISs. 79 Fed. Reg. at 77817; *see also id.* at 77828 (agencies should assess the  
15 environmental effects "based on available climate change information"); *N. Plains Res. Council*  
16 *v. Surface Transp. Bd.*, 668 F.3d 1067, 1079 (9th Cir. 2011) (NEPA requires agencies to engage  
17 in reasonable forecasting when preparing EISs, as speculation is implicit in NEPA).  
18  
19

20 Last, BLM argues that the analysis of climate change in the Final EIS is consistent with  
21 CEQ's guidance on considering climate change under NEPA. BLM's Br. at 54. The CEQ  
22 guidance makes clear, however, that agencies must consider the implications of climate change  
23 for a proposed action by assessing the combined impacts of both climate change and the  
24 agency's proposal. 79 Fed. Reg. at 77813 ("Agencies should consider the specific effects of the  
25 proposed action [and] the nexus of those effects with projected climate change effects"); *id.* at  
26 77825 ("Federal agencies, to remain consistent with NEPA, should . . . take into account the  
27  
28

1 ways in which a changing climate over the life of the proposed project may alter the overall  
2 environmental implications of such actions”). This analysis is especially important for actions  
3 such as the Groundwater Project, which are “designed for long-term utility and involve resources  
4 considered vulnerable to specific effects of climate change within the timeframe of the proposed  
5 project’s anticipated useful life.” *Id.* at 77813. By contrast, in the cumulative impacts sections  
6 of the Groundwater Project EIS, BLM considers the effects of climate change on the various  
7 resources in isolation and apart from the severe, long-term environmental consequences that are  
8 predicted to result from implementation of the Groundwater Project.

9  
10 In sum, BLM’s failure to assess and disclose the combined environmental consequences  
11 of both climate change and the Groundwater Project on affected resources violates NEPA.  
12

13 **III. BLM Failed to Consider Significant, Relevant Factors Concerning Mitigation in the**  
14 **EIS and Record of Decision, in Violation of NEPA and the APA**

15 A. BLM Failed to Address Thresholds for When Additional Mitigation is Necessary  
16 to Prevent Irreversible Impacts to Springs, Streams, and Other Resources

17 There is no dispute that the Groundwater Project will result in widespread and severe  
18 impacts to springs, streams, and other resources; and that thresholds should be identified for  
19 when additional mitigation measures must be implemented to protect resources from undue  
20 degradation. As explained in the Center’s opening brief, BLM failed to address fundamental  
21 factors concerning these triggers or thresholds in the EIS, including (1) BLM failed to determine  
22 what the thresholds would be prior to signing the Record of Decision and issuing the right-of-  
23 way; (2) BLM failed to assess the effectiveness of its yet-undisclosed thresholds or its overall  
24 mitigation plan; (3) BLM failed to consider and take into account the extremely long delay that  
25 would occur between when any established thresholds are exceeded, and when the impaired  
26  
27  
28

1 spring or streams would eventually return to equilibrium; and (4) BLM failed to support its  
2 unidentified thresholds with any analytical data or scientific evidence. Center’s Br. at 24-26.

3  
4 As explained, EPA repeatedly brought these concerns to BLM’s attention during the  
5 NEPA process. Center’s Br. at 23-24. BLM argues in its response that “EPA did not go so far  
6 as CBD.” BLM’s Br. at 39. EPA’s comments, however, closely track the Center’s arguments  
7 concerning the deficiencies in the Groundwater Project EIS. EPA requested that BLM identify  
8 in the EIS the specific thresholds that would trigger additional mitigation measures if exceeded  
9 (AR Doc. 9469 at 38117); criticized BLM for failing to address in the EIS the “effectiveness of  
10 the mitigation strategy, as a whole, in preserving regional ecosystem functions” (*id.*); and  
11 commented that due to the “long time frames,” the EIS “should address the time lag between  
12 cessation of pumping and recovery of groundwater levels.” AR Doc. 12115 at 95996.<sup>12</sup>

13  
14 BLM’s acknowledges in its response that it “must seriously consider EPA’s comments.”  
15 BLM’s Br. at 39, n. 14, *citing Citizens Against Burlington v. Busey*, 938 F.2d 190, 201 (D.C. Cir.  
16 1991); *see also Sierra Club*, 310 F.Supp. 2d at 1196 (finding that an agency’s response to EPA’s  
17 comments was inadequate); 40 C.F.R. § 1503.4 (agencies required by NEPA consider and  
18 respond to comments). Here, however, BLM merely informed EPA that its concerns with the  
19 project’s mitigation plan will be addressed later, *outside* of the NEPA process. *See* AR Doc.  
20 12417 at 133065 (stating that “impact thresholds” and “mitigation effectiveness” will be  
21 included “in the development of a comprehensive project-wide monitoring and mitigation plan”).  
22

23  
24 The fact that BLM did not take EPA’s concerns seriously is plainly evident in EPA’s  
25 comments that are *subsequent to* BLM’s response to comments on the Draft EIS. In its later

26  
27 <sup>12</sup> *See also* AR Doc. 9262 at 35070 (U.S. Fish and Wildlife Service, commenting that the  
28 effectiveness of monitoring “in providing ‘early warning’ of undesirable impacts is unknown”  
and that “[t]ime lags in biological response to hydrologic changes could be problematic and need  
to be taken into account when planning and implementing . . . mitigation measures”).

1 comments on the “Administrative Final EIS” (“AFEIS”), EPA continued to maintain that “the  
2 mitigation and adaptive management strategy outlined in the AFEIS does not appear viable.”  
3 AR Doc. 12155 at 95991. EPA also continued to criticize BLM’s decision to defer until later  
4 key questions concerning the mitigation strategy for the Groundwater Project:  
5

6 BLM defers an important part of the impact assessment – the discussion of probable  
7 effectiveness of the mitigation strategy as a whole – to the future COM plan, which will  
8 be developed after BLM’s Record of Decision. It is important to include this information  
9 in the Tier 1 analysis to evaluate, at a programmatic level, the general mitigation  
10 approach that will be relied upon in the subsequent tiered NEPA documents.

11 *Id.* at 95992. EPA thus again requested that the EIS provide greater detail regarding the  
12 mitigation plan, including “an evaluation of the effectiveness of the adaptive management  
13 strategy, considering the long recovery times for groundwater levels to rebound after the  
14 cessation of pumping.” *Id.*; *see also id.* at 95994 (stating that BLM’s plan “does not appear to be  
15 an effective mitigation proposal” due to “the very long timeframes for effects of adaptive  
16 management actions (e.g. stopping groundwater pumping) to be seen in the landscape”).<sup>13</sup>

17 In responding to its failure to identify the thresholds that will trigger when additional  
18 mitigation measures are necessary, BLM does not dispute that this will occur later, outside of the  
19 NEPA process, by “SNWA and other parties.” BLM’s Br. at 34 (explaining that “SNWA and  
20 other parties” will “establish environmental indicators,” and that “SNWA and other parties” will  
21 “develop specific early warning thresholds”). NEPA requires, however, that “environmental  
22 information is available to public officials and citizens before decisions are made and before  
23 actions are taken.” 40 C.F.R. § 1500.1(b); *Blue Mts. Biodiversity Project v. Blackwood*, 161  
24 F.3d 1208, 1216 (9th Cir. 1998) (“NEPA emphasizes the importance of . . . comprehensive up-

25  
26 <sup>13</sup> EPA again later restated its position within its comments on the Final EIS: “We have  
27 concerns regarding the effectiveness of the adaptive management proposal because . . .  
28 objectives have not been identified, and the time lags associated with monitoring impacts to  
groundwater present substantial challenges to the effectiveness of adaptive actions.” AR Doc.  
13399 at 148677.

1 front environmental analysis” to ensure that the agency will not regret its decision “after it is too  
2 late to correct”); *see also* 40 C.F.R. § 1502.16(h) (an EIS must address mitigation); *id.* § 1508.20  
3 (mitigation includes avoiding the impact altogether, minimizing impacts by limiting the degree  
4 or magnitude of the action and its implementation, rectifying the impact by restoring the affected  
5 environment, reducing or eliminating the impact over time, and compensating for the impact).

7 In response to its failure to address the effectiveness of the mitigation plan for the  
8 Groundwater Project, BLM continues to rely on its consideration of individual component parts  
9 of its mitigation strategy. BLM’s Br. at 40. EPA has explained why this is insufficient:

10 We acknowledge that the DEIS attempts to convey effectiveness of each proposed  
11 mitigation measure and the residual impacts that would occur after mitigation. However,  
12 the DEIS does not evaluate the probable effectiveness of the mitigation strategy, as a  
13 whole, in preserving regional ecosystem functions. *Because of the large magnitude and*  
14 *scale of potential impacts, it is critical that an evaluation of regional mitigation*  
*effectiveness be included in the programmatic-level impact assessment and not deferred*  
*to future tiered NEPA analysis.*

15 AR Doc. 9469 at 38117 (emphasis added). Moreover, as further explained by EPA, BLM also  
16 cannot defer its assessment of the mitigation effectiveness for the Project to the future “COM  
17 Plan,” as the “courts have ruled that agencies should discuss mitigation measures, along with an  
18 assessment of whether they can be effective, in the EIS.” AR Doc. 12115 at 95993-94.

20 BLM states that it “respectfully disagrees” with EPA that it was required to assess the  
21 overall effectiveness of the mitigation plan in the EIS. BLM’s Br. at 41, n. 15. Congress,  
22 however, has recognized the expertise of EPA by directing the agency to review and comment on  
23 all EISs. 42 U.S.C. § 7609(a). Moreover, EPA relied on guidance from CEQ, which is the  
24 agency charged with overseeing NEPA. AR Doc. 9469 at 38117 (noting that CEQ guidance  
25 states that “the probability of the mitigation measures being implemented must also be  
26 discussed”). BLM, on the other hand, is to receive no deference regarding its opinion that the  
27  
28

1 Groundwater Project EIS complies with NEPA. *Grand Canyon Trust v. Fed. Aviation Admin.*,  
2 290 F.3d 339, 342 (D.C. Cir. 2002) (“the court owes no deference to [BLM’s] interpretation of  
3 NEPA or the CEQ regulations because NEPA is addressed to all federal agencies”).

4       Indeed, EPA is correct that agencies must address in the EIS “mitigation measures, along  
5 with an assessment of whether they can be effective.” AR Doc. 12115 at 95994, *citing*  
6 *Neighbors of Cuddy Mt. v. U.S. Forest Serv.*, 137 F.3d 1372, 1381 (9th Cir. 1998) (finding that  
7 agency failed to provide “an estimate of how effective the mitigation measures would be if  
8 adopted”). As explained by EPA, the “omission of a reasonably complete discussion of possible  
9 mitigation measures would undermine the action-forcing function of NEPA and prevent the  
10 agency and interested parties from properly evaluating the severity of the adverse affects.” *Id.*,  
11 *citing Robertson v. Methow Valley Citizens Council*, 490 U.S. 332, 352 (1989).

12       BLM also argues that it appropriately considered the long delay between when any  
13 established thresholds are exceeded, and when water levels would return to equilibrium. BLM’s  
14 Br. at 41. The pages cited by BLM, however, only highlight the problem. In the context of  
15 discussing the impacts of groundwater drawdown on “federal resources and federal water  
16 rights,” BLM stated that if it determines through monitoring that impacts are occurring, it would  
17 then determine “if emergency action and/or a mitigation plan is required.” AR Doc. 12414 at  
18 130127. According to the EIS, “[t]he early warning monitoring system coupled with BLM  
19 authority to require that specific measures be implemented in a timely manner to avoid,  
20 minimize or offset the impacts is expected to be effective at minimizing residual adverse effects  
21 to federal resources and federal water rights.” *Id.* at 130128. As explained by EPA, however,  
22 the very long response time is a key reason why BLM’s entire mitigation plan may in fact be  
23 ineffective. More specifically, BLM’s “adaptive management” approach “does not appear to be  
24  
25  
26  
27  
28

1 an effective mitigation proposal for this project” in part because “the very long timeframes for  
2 effects of adaptive management actions (e.g. stopping groundwater pumping) to be seen in the  
3 landscape could result in irreversible loss of resources.” AR Doc. 12115 at 95994.

4  
5 In contrast to EPA’s identification of this issue as a fundamental problem affecting the  
6 entire mitigation and “adaptive management” strategy, BLM merely stated in the EIS, under its  
7 discussion of “potential residual impacts,” that the recovery of water levels in some areas “could  
8 take several years or decades.” AR Doc. 12414 at 130128. “Therefore, a long-term reduction in  
9 surface discharge at perennial surface water source areas is likely to occur in some areas.” *Id.*  
10 The “potential residual impacts” on “federal resources” in “some areas,” lasting “several years to  
11 decades,” however, is far different from EPA’s concern that “the mitigation and adaptive  
12 management strategy outlined in the [EIS] does not appear viable.” AR Doc. 12115 at 95991.

13  
14 Last, BLM argues that the Ninth Circuit upheld a similar mitigation plan in *Northern*  
15 *Alaska Env'tl. Ctr. v. Kempthorne*, 457 F.3d 969 (9th Cir. 2006). BLM’s Br. at 37. In *Northern*  
16 *Alaska*, BLM was analyzing a plan for oil and gas leases across “vast reaches” of northern  
17 Alaska. *N. Alaska Env'tl. Ctr.*, 457 F.3d at 973. Significantly, BLM did not know at this leasing  
18 stage which specific areas, if any, “subsequent exploration would find most suitable for drilling.”  
19 *Id.* at 974. The court therefore held that “[b]ecause it is impossible to know which, if any, areas . .  
20 . are most likely to be developed, BLM development of more specific mitigating measures  
21 cannot be required at this stage.” *Id.* at 979.<sup>14</sup> In this case, by contrast, BLM analyzed the  
22 impacts of specific levels of groundwater production from each of the four basins, and found  
23 severe impacts to water, vegetation, and other resources. *See e.g.*, AR Doc. 47277 at 188142;  
24 AR Doc. 12414 at 130183; *id.* at 130350. What distinguishes this case from *Northern Alaska* is  
25  
26

27  
28 <sup>14</sup> Similarly, in *San Juan Citizens*, the agency did not yet know the location or extent of future  
gas development. *San Juan Citizens Alliance v. Stiles*, 654 F.3d 1038, 1054-55 (10th Cir. 2011).

1 that the Center's claims, as well as the concerns of state and federal agencies, are focused on the  
2 severe impacts of the proposed groundwater withdrawal on the affected region, regardless as to  
3 the precise site-specific locations of future groundwater facilities or wells. BLM has not  
4 explained, however, why a comprehensive mitigation strategy for these impacts could not be  
5 fully addressed now, in the EIS. Finally, there is no indication in *Northern Alaska* that EPA had  
6 repeatedly expressed concerns that the proposed mitigation plan was likely to be ineffective.

8 B. BLM Failed to Consider Compensatory Mitigation for Wetland Losses

9 BLM does not dispute in its response that the Groundwater Project will adversely affect  
10 thousands of acres of wetlands. Center's Br. at 27; see AR Doc. 13399 at 148674 (the Project  
11 would result in the "likely loss" of "3,096 acres of wetlands"); *id.* at 148678 ("The FEIS predicts  
12 moderate to high risk for thousands of acres of wetlands"). BLM also did not respond to EPA's  
13 concern that this irreversible loss of wetlands may be "unmitigable, given the potential need for  
14 thousands of acres of created waters of the U.S. and compensatory wetlands." AR 9469 at  
15 38113, 38120. BLM's response instead focuses solely on the "first phase of construction" of the  
16 Groundwater Project, and argues that it can defer until later how it will compensate for the  
17 thousands of acres of wetlands impacts. BLM's Br. at 43-44. BLM's approach violates NEPA.

18 BLM is correct that the Center did not bring this claim under the Clean Water Act, or  
19 against the U.S. Army Corps of Engineers. BLM's Br. at 43. The Center instead argues that  
20 BLM violated NEPA by refusing to address compensatory mitigation for wetlands in the EIS.  
21 First, NEPA specifically required BLM to address mitigation in the Groundwater Project EIS,  
22 including "[c]ompensating for the impact by replacing or providing substitute resources or  
23 environments." 40 C.F.R. § 1508.20(e). This NEPA requirement is especially important where,  
24 as here, there will be severe impacts "that can only be modestly ameliorated through the  
25  
26  
27  
28

1 commitment of vast public and private resources.” *Robertson*, 490 U.S. at 352. Second, NEPA  
2 required to address in the EIS how the Project will comply with other environmental laws and  
3 policies, which includes the compensatory mitigation for impacts to wetlands mandated by  
4 Section 404 of the Clean Water Act. 40 C.F.R. § 1502.2(d). And third, NEPA requires early,  
5 upfront environmental analysis “to head off potential conflicts.” *Id.* § 1501.2; *Blue Mts.*, 161  
6 F.3d at 1216. BLM failed to address in the EIS the “potential conflict” between the thousands of  
7 acres of wetlands that will be lost as a result of the Project and the need to compensate for these  
8 widespread losses, which EPA has warned “may be unmitigable.” AR Doc. 12115 at 96999.<sup>15</sup>

9  
10 Indeed, EPA notified BLM of its duty to address this issue in the EIS throughout the  
11 NEPA process. In its initial comments, EPA stated that the EIS should identify impacts to  
12 wetlands, “including identification of Section 404 Clean Water Act (CWA) requirements, and  
13 management and mitigation proposals to ensure compliance with these requirements.” AR Doc.  
14 2363 at 5281. EPA noted that these requirements include “all appropriate and practicable  
15 compensation measures for unavoidable losses to waters of the United States, including  
16 wetlands.” *Id.* When BLM failed to address this issue, EPA again commented that the “EIS  
17 should evaluate the ability to meet the requirements of the CWA Section 404’s compensatory  
18 mitigation rule, and discuss the opportunities that may exist for compensatory mitigation in the  
19 project area.” AR Doc. 9468 at 38110. As recognized by EPA, the severe losses of wetlands  
20 resulting from the Project “may, in fact, be unmitigable, given the potential need for thousands of  
21 acres of created waters of the U.S. and compensatory wetlands.” AR 9469 at 38120. And after  
22 BLM’s response to comments on the Draft EIS, EPA continued to raise this same concern:  
23  
24  
25

26  
27 <sup>15</sup> While SNWA discusses mitigation measures that are included in the EIS, these measures do  
28 not include compensatory mitigation for the thousands of acres of wetlands that will be adversely  
impacted by the Groundwater Project, as predicted by BLM in the EIS. SNWA’s Br. at 46.

1 Opportunities for compensatory mitigation should be discussed in the FEIS because, as  
2 we previously commented, *lost acreage may be unmitigable* given the potential need for  
3 large amounts of acreage of created waters of the U.S. and compensatory wetlands. . .  
4 The FEIS should discuss possible options for compliance with the Compensatory  
5 Mitigation Rule and the practicability of this mitigation.

6 AR Doc. 12115 at 95999 (emphasis added); *see also* AR Doc. 9467 at 38107 (U.S. Army Corps  
7 of Engineers commenting that “mitigation plans should be developed to compensate for the  
8 unavoidable losses resulting from project implementation”).<sup>16</sup>

9 Despite the clear comments from EPA and others on this issue during the NEPA process,  
10 there was still no discussion in the EIS addressing how BLM or SNWA could compensate for the  
11 thousands of acres of impacts to wetlands that BLM predicts in the EIS will result from the  
12 Groundwater Project. This is precisely the type of conflict that NEPA is intended to avoid. 40  
13 C.F.R. § 1501.2. BLM violated NEPA by deciding to defer consideration of such an important  
14 issue, and to instead consider the required mitigation piecemeal as it approves future segments of  
15 the Project. *Robertson*, 490 U.S. at 349 (“NEPA ensures that important effects will not be  
16 overlooked or underestimated only to be discovered after resources have been committed or the  
17 die otherwise cast”); W. Rodgers, *Environmental Law* § 7.7 at 767 (1977) (NEPA's purpose “is  
18 to require consideration of environmental factors before project momentum is irresistible, before  
19 options are closed, and before agency commitments are set in concrete”). BLM’s refusal to  
20 consider such an important aspect of the Groundwater Project renders the EIS insufficient.  
21 *Native Village of Point Hope v. Jewell*, 740 F.3d 489, 493 (9th Cir. 2014) (NEPA requires  
22 agencies to consider every significant aspect of the environmental impact of a proposed action).

23  
24  
25 <sup>16</sup> SNWA claims in its response that EPA’s comments on the Groundwater Project are based on  
26 an “exaggerated calculation.” SNWA’s Br. at 47. SNWA, however, fails to cite to anywhere in  
27 the record where BLM contested EPA’s comments or calculation. Thus, there is no evidence to  
28 support the argument that the reason BLM failed to address this issue in the EIS, as requested by  
EPA, is because it disagreed with the substance of EPA’s comments.

1 **IV. BLM Failed to Demonstrate that the Groundwater Project Will Comply with the**  
2 **Ely RMP's Mandatory Protections for Wildlife and Aquatic Species**

3 BLM does not dispute that the Groundwater Project must comply with the mandatory  
4 standards and guidelines in the Ely Resource Management Plan ("RMP"), including those  
5 designed to protect wildlife and aquatic species. In defending BLM's failure to demonstrate  
6 compliance with RMP standards for the Project, counsel for BLM provides explanations that  
7 have no support in the record, and highlights deficiencies in the EIS where BLM only arguably  
8 considered the impacts of one component of the Project on a small subset of the affected species.  
9

10 A. Compensatory Mitigation Requirements for "Special Status Species"

11 Ely RMP standard SS-10 requires BLM to mitigate for all activities "that result in the  
12 loss of special status species habitats on a ratio of 2 acres of comparable habitat for every 1 acre  
13 of lost habitat." AR Doc. 47482 at 197079. As explained, the Groundwater Project would  
14 impact numerous special status species habitats, including desert bighorn sheep, sage grouse, a  
15 large number of species of bats, bald eagle, ferruginous hawk, golden eagle, northern goshawk,  
16 western burrowing owl, dark kangaroo mouse, pygmy rabbit, northern leopard frog, Bonneville  
17 cutthroat trout, Pahrump poolfish, White River spinedace, relict dace, Meadow Valley Wash  
18 desert sucker and speckled dace, and several species of springsnails. Center's Br. at 30-31,  
19 *citing* AR Doc. 12416 at 132198-132205, 132318-24, 130419-20. BLM failed to demonstrate in  
20 the record that the Groundwater Project will comply with RMP standard SS-10 for these species.  
21

22 In the Groundwater Project EIS, BLM divides the environmental consequences of the  
23 Project into three components: (1) construction of the initial right-of-way and ancillary facilities;  
24 (2) the groundwater development areas (including wells, access roads, and gathering pipelines);  
25 and (3) the impacts resulting from groundwater pumping. AR Doc. 12413 at 129838. Counsel  
26 for BLM first errs by claiming that BLM only needed to demonstrate compliance with the RMP  
27  
28

1 standard for one of these three components: the impacts caused directly by construction of the  
2 initial right-of-way. BLM's Br. at 63-66. There is no support for this position in the Ely RMP or  
3 elsewhere in the record. The entire purpose of the right-of-way is to access the groundwater  
4 development areas and pump and transport groundwater, and indeed BLM recognized the need  
5 to assess the impacts of all three components in the EIS, and found widespread, severe impacts to  
6 wildlife and aquatic habitats. *See* AR Doc. 12414 at 130465-68 (impacts from right-of-way  
7 construction); AR Doc. 12414 at 130349-50, 130623-24 (impacts from groundwater  
8 development and groundwater pumping). If BLM cannot demonstrate compliance with the RMP  
9 standards for all components of the Project, then it was arbitrary and in violation of FLPMA for  
10 BLM to authorize the Project to proceed. 43 U.S.C. § 1732(a); 43 C.F.R. § 1610.5-3(a).

13 Counsel for BLM also argues, again without any citation to the record, that the Ely RMP  
14 standard only applies to the "permanent loss" of habitat, and not the "long term disturbance" of  
15 habitat. BLM's Br. at 63-64; *id.* at 64 (table). This argument, however, is directly contradicted  
16 by the record, where BLM looks to "disturbed habitat" in discussing this standard. AR Doc.  
17 12415 at 131186-87 (stating would improve 2 acres of habitat for every 1 acre of "disturbed  
18 habitat"); AR Doc. 47277 at 188423-25 (same). Moreover, the habitat disturbed by construction  
19 of the right-of-way would require "20 to *more than 200 years*" to recover, with close to 1000  
20 acres "permanently converted" to industrial uses. AR Doc. 12414 at 130310 (emphasis added).

22 BLM's counsel further argues that for avian and bat species, the RMP standard only  
23 applies to "nesting habitat," and not "foraging habitat." BLM's Br. at 64. Once again, BLM  
24 provides no citations from the record. *Id.* This is because there is no evidence in the record that  
25 the RMP standard was intended to only protect some, but not all, of a species' habitat needs.  
26  
27  
28

1 As set forth in the Center's opening brief, for a very small subset of the special status  
2 species that will suffer habitat loss as result of the Groundwater Project, BLM provided in the  
3 EIS a summary conclusion that the Project will comply with the RMP requirement. Center's Br.  
4 at 33, *citing* AR Doc. 12415 at 131186-87 (desert bighorn sheep, sage grouse, pygmy rabbit).  
5 BLM claims that for these species, the Center is "incorrect that BLM has not required 2:1  
6 compensatory mitigation." BLM's Br. at 65. As the Center explained, however, FLPMA does  
7 not allow BLM to include only a conclusory statement proclaiming that it will comply with the  
8 standard. Center' Br. at 33, *citing Or. Natural Res. Council Fund ("ONRC") v. Brong*, 492 F.3d  
9 1120, 1131-32 (9th Cir. 2007) (finding violation of FLPMA where BLM made "little more than  
10 a conclusory statement" that the research logging was appropriate and failed to explain how  
11 project would comply with the requirement).<sup>17</sup> While BLM attempts to distinguish *ONRC* on the  
12 facts, the basic principle remains that the agency must explain how the project will comply with  
13 the applicable standard, and not make "little more than [a] conclusory statement." *ONRC*, 492  
14 F.3d at 1132. For the Groundwater Project, there is no indication in the record that BLM ever  
15 considered whether or not thousands of acres of comparable habitat on BLM lands are even  
16 available to mitigate for the widespread habitat destruction for these affected sensitive species.<sup>18</sup>  
17  
18  
19  
20

21 <sup>17</sup> See also *Native Ecosystems Council v. U.S. Forest Serv.*, 418 F.3d 953, 963 (9th Cir. 2005)  
22 (stating that the reviewing court must be able "reasonably to ascertain from the record" whether  
23 the agency was in compliance with the RMP standard).

24 <sup>18</sup> SNWA goes a step further and argues that BLM was only required to assert in a monitoring  
25 and mitigation plan, which is still being developed and not yet approved, that all actions will  
26 conform to the Ely RMP. SNWA's Br. at 61. The Ninth Circuit, however, requires agencies to  
27 demonstrate how a proposed action will comply with the applicable RMP standards, and not just  
28 state that it will comply. *ONRC*, 492 F.3d at 1131-32. This is especially important for a  
proposed action such as the Groundwater Project, where BLM admits there will be a long-term  
loss of many thousands of acres of sensitive species' habitat, and yet provides no indication as to  
where it will find double this amount of habitat to be restored, as required by the RMP.

1 For the dozens of additional special status species, for which BLM does not even provide  
2 the conclusory sentence that the Groundwater Project will comply with the required 2:1 standard,  
3 BLM claims that it “appropriately explained” why such mitigation was not necessary. BLM’s  
4 Br. at 65. Notably, BLM provides no supporting citation to the record because it does not exist.  
5

6 First, for the golden eagle and ferruginous hawk, BLM admits that it only considered the  
7 direct impacts from construction of the right-of-way, and therefore did not consider the impacts  
8 from the Project’s other two components. BLM’s Br. at 65-66. And even for just the impacts  
9 caused by construction of the right-of-way, the EIS disclosed that impacts would include the  
10 “long-term reduction of approximately 10,460 acres of golden eagle foraging habitat, [and] 4,340  
11 acres of ferruginous hawk nesting and foraging habitat.” AR Doc. 12414 at 130467. Moreover,  
12 “[f]acility maintenance would result in the permanent conversion of 835 acres of golden eagle  
13 foraging habitat, [and] 306 acres of ferruginous hawk nesting and foraging habitat.” *Id.*<sup>19</sup>  
14 Contrary to the assertion of its counsel, BLM never determined in the record that the chosen  
15 mitigation measures would prevent all loss of habitat for these sensitive species. BLM’s Br. at  
16 66. Similarly, there is no record evidence to support BLM’s counsel’s assertion that “BLM  
17 reasonably determined that requiring 2:1 compensatory mitigation was not necessary.” *Id.*  
18  
19

20 Second, for the fourteen special status bat species, BLM again focuses only on the direct  
21 impacts caused by pipeline construction. BLM’s Br. at 66. Even for just these impacts, however,  
22 the EIS found that the Project would result in the “long-term reduction” of up to 10,420 acres of  
23 foraging habitat, and that “facility maintenance would result in the permanent conversion of 101  
24 to 955 acres of habitat to industrial uses.” AR Doc. 12414 at 130468. The plain language of the  
25

---

26 <sup>19</sup> While BLM claims in its response that surveys have not located any nests within the path of  
27 the right-of-way (BLM’s Br. at 66), the EIS states that the golden eagle and ferruginous hawk  
28 “have been observed within or near the [right-of-ways],” and that two active ferruginous hawk  
nests are found within the 0.5 mile buffer of the right-of-way. AR Doc. 12414 at 130425.

1 RMP standard therefore required thousands of acres of compensatory mitigation. AR Doc.  
2 47482 at 197079. Counsel for BLM concludes, however, that because “only bat foraging habitat  
3 would be affected” and because bat colonies have not been found within the right-of-way itself,  
4 “BLM’s decision not to require 2:1 compensatory mitigation was reasonable.” BLM’s Br. at 66.  
5 But again, BLM cites to no support in the record. This is because there is no support for BLM’s  
6 litigation position that the RMP standard does not apply to foraging habitat. And more  
7 fundamentally, there is no evidence that BLM ever made the determination, within the record,  
8 not to require the RMP standard’s 2:1 compensatory mitigation for the affected bat species.  
9

10 Similarly, for the dark kangaroo mouse, BLM states in the EIS that direct impacts from  
11 just construction of the right-of-way would include the “long-term reduction of approximately  
12 6,583 acres” of habitat, and that “facility maintenance would result in the permanent conversion  
13 of 521 acres.” AR Doc. 12414 at 130468. Counsel for BLM claims that BLM “reasonably  
14 chose to defer” to the Nevada Department of Wildlife to develop mitigation for the kangaroo  
15 mouse “rather than require 2:1 compensatory mitigation for lost habitat.” BLM’s Br. at 67.  
16 Once again, however, BLM provides no citation to the record to support this conclusion. *Id.*  
17 This is because there is again no record evidence that BLM ever considered whether the Project  
18 could comply with the RMP’s 2:1 compensatory mitigation requirement for the kangaroo mouse.  
19

20 For the additional special status species that would be impacted by the Groundwater  
21 Project, counsel for BLM provides no argument as to how the Project will comply with the  
22 RMP’s compensatory mitigation requirement. BLM’s Br. at 63-67. Moreover, there is nowhere  
23 in the record where BLM has “reasonably explained” or “appropriately considered” why the  
24 RMP’s compensatory mitigation does not apply to these species. *Id.* at 65. Thus, for species  
25 such as the northern goshawk, the EIS acknowledged the Project will result in the “long-term  
26  
27  
28

1 reduction” of thousands of acres of “foraging and nesting habitat,” but there is no discussion of  
2 compliance with the RMP standard. AR Doc. 12414 at 130482, 130515. Similarly, construction  
3 of the right-of-way would cause the long-term loss of 4,900 acres of bald eagle foraging habitat,  
4 but there is no mention of the RMP standard in the EIS. *Id.* at 130467. The same is true for the  
5 loss of habitat for the northern leopard frog and the many aquatic special status species.  
6

7 Last, SNWA cites to *League of Wilderness Defenders (“LOWD”) v. Allen*, 615 F.3d  
8 1122 (9th Cir. 2010), to argue that the court should defer to BLM’s determination that the Project  
9 would comply with the RMP standard. SNWA’s Br. at 62. In *LOWD*, however, the Forest  
10 Service had carefully explained how the proposal was consistent with the Forest Plan, which was  
11 reviewed and confirmed by the agency’s regional office and the U.S. Fish and Wildlife Service  
12 “out of an abundance of caution.” *LOWD*, 615 F.3d at 1128-29, 1132. For the Groundwater  
13 Project, by contrast, BLM merely asserted in the EIS that it would comply with the 2:1 standard  
14 for some species; and for most species the EIS does not even mention the standard. Thus, unlike  
15 *LOWD*, the court cannot defer to the BLM’s analysis because there is no analysis.  
16

17 In sum, for the dozens of special status species that BLM admits will lose thousands of  
18 acres of habitat as result of the Groundwater Project, the EIS provided only an unsupported  
19 conclusion for a few species, claiming that BLM will comply with the RMP standard; and for the  
20 remaining species, the EIS provided no explanation at all as to whether BLM will comply with  
21 the standard. Based on the record before the court, BLM failed to demonstrate compliance with  
22 RMP standard SS-10, in violation of FLPMA. 43 U.S.C. § 1732(a); 43 C.F.R. § 1610.5-3(a).  
23

24 B. Compensatory Mitigation Requirements for Impacts to Aquatic Species  
25

26 The proposed action for the Groundwater Project is the right-of-way request by SNWA,  
27 which it seeks in order to “construct, operate, and maintain the main conveyance pipeline and  
28

1 related facilities to support the future pumping and transport of groundwater from Spring,  
2 Delamar, Dry Lake, and Cave Valleys.” AR Doc. 47277 at 188126. The EIS thus assessed the  
3 impacts resulting from construction of the pipeline, and “future groundwater development  
4 facilities and related groundwater pumping,” as required by NEPA. *Id.* at 188153; *see* 40 C.F.R.  
5 § 1502.16 (requiring agencies to analyze the direct and indirect effects of proposed actions).  
6

7 The EIS found that the Groundwater Project would cause severe impacts to streams,  
8 springs, and other aquatic resources, including the reduction in flow in 24 streams and 18  
9 springs. AR Doc. 12414 at 130620-24. These flow reductions “could affect all types of aquatic  
10 communities including fish, amphibians, macroinvertebrates, macrophytes, and algae.” *Id.* at  
11 130623. Despite the disclosure of these severe aquatic impacts, however, BLM failed to address  
12 the Project’s compliance with the following mandatory standard from the Ely RMP:  
13

14 WL-4: Mitigate all discretionary permitted activities that result in the loss of aquatic and  
15 priority wildlife habitats by improving 2 acres of comparable habitat for every 1 acre of  
16 lost habitat as determined on a project-by-project basis.

17 AR Doc. 47482 at 197074.

18 In response, BLM claims that it did not need to demonstrate that the Groundwater Project  
19 will comply with this RMP standard “because BLM has not approved any facilities for  
20 groundwater pumping.” BLM’s Br. at 68.<sup>20</sup> Agencies, however, are required to integrate NEPA  
21 “at the earliest possible time” in order to “head off potential conflicts” (40 C.F.R. § 1501.2),  
22 including “[p]ossible conflicts between the proposed action and objectives of . . . land use plans.”  
23 40 C.F.R. § 1502.16(c); *see also id.* § 1502.2(d) (agencies must evaluate in an EIS how proposal  
24 will achieve compliance with other environmental laws). This is precisely the type of conflict  
25 that early NEPA is intended to “head off,” as there is no evidence in the record that BLM will be  
26

27 \_\_\_\_\_  
28 <sup>20</sup> SNWA makes the same argument, as it focuses only on the impacts from construction of the  
right-of-way, and ignores the groundwater facilities and withdrawals. SNWA’s Br. at 63-64.

1 able to compensate for the widespread, severe impacts to aquatic habitat caused by the  
2 Groundwater Project, as disclosed in the EIS. Moreover, waiting for future NEPA processes,  
3 years down the road, that only consider smaller component parts of the Project, will be too little,  
4 too late, as considerable time and expense will have already been expended in analyzing and  
5 approving the overall Project and in constructing the main pipeline. *See Marsh*, 490 U.S. at 371  
6 (“NEPA ensures that the agency will not act on incomplete information, only to regret its  
7 decision after it is too late to correct”); *Watt*, 716 F.2d at 952 (explaining that once agencies and  
8 private parties have become committed to a particular choice of action, it becomes far more  
9 difficult to influence later decisionmaking concerning that project).

10  
11 BLM also argues that the EIS “discusses mitigation that will be employed to protect  
12 aquatic species during later phases of the Project.” BLM’s Br. at 68, *citing* AR 130119-29,  
13 131179-84, 131189-90. But this argument further highlights the problem, as the mitigation for  
14 aquatic species discussed in the EIS fails to even consider the compensatory mitigation for  
15 aquatic species that is required by the Ely RMP. *Id.* As it stands, there is no evidence in the EIS  
16 or elsewhere as to how BLM will be able to comply with this mandatory standard in light of the  
17 severe, widespread, and unprecedented impacts to aquatic habitat, as acknowledged by BLM in  
18 the EIS. As result, the BLM has not demonstrated that the Groundwater Project can comply with  
19 this RMP standard, as required by FLPMA. 43 U.S.C. § 1732(a); 43 C.F.R. § 1610.5-3(a).

20  
21  
22 C. Additional Standards for Sagebrush Habitat and Natural Water Sources

23 As set forth in the Center’s opening brief, the Groundwater Project would also result in  
24 widespread, severe impacts to sagebrush habitat and natural water sources. Center’s Br. at 36.  
25 For the three components of the Groundwater Project, (1) construction of the right-of-way would  
26 “remove or disturb” 10,681 acres of native shrublands and woodlands; (2) construction of  
27  
28

1 groundwater development areas would impact an additional 2,698 to 6,629 acres; and (3)  
2 groundwater pumping would adversely impact a staggering 130,000 acres of basin shrubland.  
3 AR Doc. 12414 at 130310, 130349-50. The groundwater pumping would also decrease natural  
4 water sources and put at risk over 200 springs and 33 miles of perennial streams. *Id.* at 130350.  
5 Despite these impacts, BLM failed to discuss or demonstrate in the EIS how the Project would  
6 comply with mandatory standards in the Ely RMP that are designed to protect sagebrush habitat  
7 and water sources. Center’s Br. at 36, *quoting* VEG-18 (requiring BLM to “focus on  
8 maintaining . . . diversity, mosaics, and connectivity of sagebrush”); SS-6 (requiring BLM to  
9 stop the “conversion of native sagebrush”); SS-38 (requiring BLM to “[m]aintain intact and  
10 quality sagebrush habitat”); and WL-18 (requiring BLM to “[r]estore natural water sources”).  
11  
12

13 For the 10,681 acres directly destroyed by construction of the right-of-way, BLM  
14 suggests that compliance with the RMP standards is not required because “9,641 acres will be  
15 reclaimed.” BLM’s Br. at 69. BLM acknowledged in the EIS, however, that it will take “20 *to*  
16 *more than 200 years* for recovery of similar species composition.” AR Doc. 12414 at 130310  
17 (emphasis added). Moreover, 945 acres would be “permanently converted to aboveground  
18 industrial uses.” *Id.* BLM provided no explanation in the record as to how degrading 10,000  
19 acres of habitat for as long as 200 years, with close to 1000 acres permanently converted to  
20 industrial use, meets the agency’s mandatory obligation to maintain intact and quality sagebrush  
21 habitat. AR Doc. 47482 at 197070 (VEG-18), 197075 (SS-6), 197079 (SS-38).  
22  
23

24 For the thousands of additional acres of sagebrush habitat impacted by the groundwater  
25 development facilities, and the 130,000 acres impacted by groundwater pumping, BLM claims  
26 that this will be evaluated “in later phases of the Project.” BLM’s Br. at 69-70. But again,  
27 NEPA requires the assessment of environmental consequences “at the earliest possible time” in  
28

1 order to “head off potential conflicts.” 40 C.F.R. § 1501.2. Here, there is a clear conflict  
2 between the acknowledged widespread impacts to basin shrubland habitat, and the Ely RMP  
3 requirements to maintain intact and quality sagebrush habitat, including the connectivity of  
4 sagebrush between geographic areas, and to stop the conversion of native sagebrush to  
5 grasslands. AR Doc. 47482 at 197070 (VEG-18); *Id.* at 197079 (SS-6); *Id.* at 197084 (SS-38).

7 BLM further contends that the agency met its mandatory requirements for RMP standards  
8 VEG-18, SS-6, and SS-18, by complying with RMP standard SS-10 for sage-grouse. BLM’s Br.  
9 at 70. There is no evidence in the record, however, that BLM ever determined that by complying  
10 with SS-10, it was thereby also complying with these three other mandatory and applicable RMP  
11 standards. Moreover, as stated above, even BLM’s asserted compliance with SS-10 for sage  
12 grouse is supported by only a conclusory statement in the EIS that it would comply, and is again  
13 limited to only one of the three components of the Project. *See* Section IV.A., *supra*.

15 Counsel for BLM and SNWA also highlight mitigation measures that will be  
16 implemented to protect sage grouse, such as burying power lines, monitoring, surveys, fence  
17 marking, and pressure washing vehicles. BLM’s Br. at 69-70; SNWA’s Br. at 65-66. What is  
18 again missing, however, is any indication in the record that BLM in fact determined that these  
19 mitigation measures, if implemented, would satisfy the agency’s specific RMP requirements to  
20 maintain and protect sagebrush habitat. The fact remains that despite the Groundwater Project’s  
21 severe and widespread impacts on sagebrush habitat, the Project’s compliance with RMP  
22 standards VEG-18, SS-6, and SS-38 is not mentioned anywhere in the EIS, and thus there is no  
23 way to determine that compliance with these standards was appropriately considered by BLM.

26 Concerning WL-18, and BLM’s requirement to “[r]estore natural water sources (i.e.,  
27 springs and seeps),” counsel for BLM again tries to punt this issue down the road to future stages  
28

1 of the Project. BLM's Br. at 70. The Groundwater Project EIS, however, did assess the impacts  
2 of groundwater pumping, as it is an indirect effect of the proposed right-of-way, and BLM found  
3 that this pumping would severely decrease natural water sources in as many as 200 springs and  
4 33 miles of streams. AR Doc. 12414 at 130350. BLM, however, provided no explanation in the  
5 record as to how it could comply with the RMP standard for restoring natural water sources  
6 despite this long-term and unprecedented degradation of springs and streams. This once again is  
7 precisely the type of "potential conflict" that a NEPA is intended to avoid. 40 C.F.R. § 1501.2.  
8

9 **V. BLM Violated FLPMA by Authorizing A Permanent Right-of-Way In White Pine**  
10 **County**

11 As explained in the Center's opening brief, BLM had authority under the Lincoln County  
12 Conservation, Recreation, and Development Act ("LCCRD Act"), and the Southern Nevada  
13 Public Land Management Act ("SNPLM Act"), to issue SNWA a permanent right-of-way in  
14 Clark and Lincoln Counties. Center's Br. at 37-39. BLM, however, lacked the authority under  
15 FLPMA to issue SNWA a permanent right-of-way in White Pine County. *Id.*  
16

17 Under FLPMA, each right-of-way "shall be limited to a reasonable term," in light of all  
18 circumstances concerning the project. 43 U.S.C. § 1764(b). Each right of way must also specify  
19 "whether it is or is not renewable," and the terms and conditions applicable to the renewal. *Id.*  
20 FLPMA provides an exception that allows permanent easements for water systems, but only in  
21 limited circumstances that are not present in this case. 43 U.S.C. § 1761(c).  
22

23 In its response, BLM argues that its interpretation of ambiguous statutory language is  
24 entitled to deference under *Chevron v. Nat. Res. Def. Council*, 467 U.S. 837 (1984). BLM's Br.  
25 at 77; *see also* SNWA's Br. at 73. BLM, however, skipped step one of the *Chevron* test:

26 When a court reviews an agency's construction of the statute which it administers, it is  
27 confronted with two questions. First, always, is the question whether Congress has  
28 directly spoken to the precise question at issue. If the intent of Congress is clear, that is

1 the end of the matter; for the court, as well as the agency, must give effect to the  
2 unambiguously expressed intent of Congress.

3 *Chevron*, 467 U.S. at 842-43. The court is only to consider whether the agency’s interpretation  
4 is permissible if the statute is “silent or ambiguous with respect to the specific issue.” *Id.* at 843;  
5 *see also Putnam Family P’ship v. City of Yucaipa*, 673 F.3d 920, 928 (9th Cir. 2012) (the court is  
6 to defer to an agency’s interpretation of a statute only “if the statute is ambiguous”).

7  
8 Here, Congress spoke on the specific issue by requiring that right-of-ways be “limited to  
9 a reasonable term.” 43 U.S.C. § 1764(b). As explained, “term” is commonly defined as “a  
10 period of time to which limits have been set,” or “a limited or definite extent of time.” Center’s  
11 Br. at 39, *citing* <http://dictionary.reference.com/browse/term>; and [http://www.merriam-](http://www.merriam-webster.com/dictionary/term)  
12 [webster.com/dictionary/term](http://www.merriam-webster.com/dictionary/term); *see also Putnam Family P’ship*, 673 F.3d at 928 (“[i]n determining  
13 whether a statute is ambiguous, we apply the traditional tools of statutory construction, including  
14 looking to the plain meaning of the text”).<sup>21</sup> BLM fails to explain why limiting a right-of-way to  
15 a reasonable term, which may or may not be renewable, is ambiguous. BLM’s Br. at 77.<sup>22</sup>

16  
17 BLM also argues that FLPMA’s exception, which allows permanent easements for water  
18 systems in limited circumstances, “is irrelevant.” BLM’s Br. 76. Statutory language, however,  
19 “cannot be construed in a vacuum.” *Sturgeon v. Frost*, \_ U.S. \_; 194 L. Ed. 2d 108, 121 (2016).  
20 “It is a fundamental canon of statutory construction that the words of a statute must be read in  
21

22  
23 <sup>21</sup> SNWA takes a segment of the definition of “term” out of context to argue that a “term” may  
24 be infinite. SNWA’s Br. at 77. The definition as a whole, however, states: “a limited or  
25 definite extent of time; *especially* : the time for which something lasts.”  
<http://www.merriam-webster.com/dictionary/term>. BLM, by contrast, does not contest in its  
26 response that the definition of term is commonly recognized as a limited period of time.

27  
28 <sup>22</sup> BLM and SNWA also argue that legislative history supports BLM’s interpretation. BLM’s  
Br. at 77 n. 31; SNWA’s Br. at 75. When a statute is clear, however, “there is no reason to resort  
to legislative history.” *U.S. v. Gonzales*, 520 U.S. 1, 6 (1997). Where the words of a statute are  
unambiguous, “the judicial inquiry is complete.” *Desert Palace v. Costa*, 539 U.S. 90, 98 (2003).

1 their context and with a view to their place in the overall statutory scheme." *Id.* Here, by  
 2 providing the limited exception for permanent easements, Congress demonstrated that it intended  
 3 the general rule under FLMPA to limit right-of-ways to reasonable terms. Similarly, by later  
 4 including specific language in the LCCRD Act and the SNPLM Act that the right-of-ways for  
 5 Clark and Lincoln Counties were to be issued in perpetuity, Congress again demonstrated that it  
 6 can be clear and explicit when it wishes to authorize permanent right-of-ways.<sup>23</sup>

8 As explained in the Center's opening brief, the BLM's regulations similarly state that  
 9 when granting a right-of-way, BLM must "impose a specific term." 43 C.F.R. § 2805.10(a)(3).  
 10 As the Center recognized, while BLM's regulations suggest that some grants may be "issued in  
 11 perpetuity," this exception must be limited to the express exception in the statute. *Id.* §  
 12 2805.11(b)(2). Any broader interpretation of this regulation would contradict the plain language  
 13 of the statute and be invalid. *Los Angeles Haven Hospice v. Sebelius*, 638 F.3d 644, 660-61 (9th  
 14 Cir. 2011) (regulation is invalid when it "is at odds with the plain language of the statute").

## 16 CONCLUSION

17 For the above stated reasons, and for the reasons set forth in the Center's opening brief,  
 18 the court should grant the Center's motion for summary judgment, and deny the cross-motions  
 19 for summary judgment filed by BLM and SNWA.  
 20

21 Dated this 18th day of May, 2016.

Respectfully submitted,  
 /s/ Marc D. Fink  
 Marc D. Fink (MN Bar No. 343407)  
 Center for Biological Diversity  
 209 East 7th Street

25 <sup>23</sup> Congress was explicit in authorizing permanent right-of-ways in the LCCRD Act and SNPLM  
 26 Act, and as a limited exception in FLPMA section 1761(c), as perpetual property agreements are  
 27 generally disfavored unless clear and unambiguous. *See e.g., Bancard Services v. E\*Trade*  
 28 *Access*, 292 F.Supp. 2d 1235, 1247-48 (D. Or. 2002), *citing McCreight v. Girardo*, 287 P.2d 414  
 (1955). In FLPMA section 1764(b), by contrast, Congress did not use the words "permanent" or  
 "perpetuity," but rather stated that each right-of-way "shall be limited to a reasonable term" and  
 "specify whether it is or is not renewable." 43 U.S.C. § 1764(b).
